- A purified interferon-α molecule that has interferon-α protein biological activity, comprising an amino acid sequence from an interferon-α2c polypeptide, with a mutation of Ser to Tyr at amino acid residue 86 or 90.
 - 2. The purified interferon- α molecule according to claim 1, wherein the interferon- α 2c polypeptide has a mutation of Ser to Tyr at amino acid residues 86 and 90.
 - 3. The purified interferon-α molecule according to claim 1, comprising at least residues 86 to 90 of the interferon-α21a polypeptide.
 - 4. The purified interferon-α molecule according to claim 3, comprising at least residues 82 to 95 of the interferon-α21a polypeptide.
 - 5. The purified interferon-α molecule according to claim 1, wherein the purified interferon-α molecule is a hybrid interferon polypeptide comprising one or more segments of interferon-α2c and interferon-α21a.
 - 6. The hybrid interferon polypeptide according to claim 5, wherein the hybrid comprises at least amino acid residues 86 or 90 of interferon-α21a.
 - 7. The hybrid interferon- α molecule according to claim 6, comprising an amino acid sequence with a structure M-N-O-P, wherein M comprises about amino acid residues 1-75 of interferon α 21a, N comprises about amino acid residues 76 to 81 of interferon- α 2c, O comprises about amino acid residues 82 to 95 of interferon- α 21a, and P comprises about amino acid residues 96 to 166 of interferon- α 2c.
 - 8. A hybrid interferon-α polypeptide, comprising an amino acid sequence selected from the group consisting of:
 - (a) an amino acid sequence as set forth in SEQ. ID NOS: 9, 11, 13, 30, 32, 34, 36, 38, 40, and 42;
 - (b) amino acid sequences with a structure X-A-B, wherein X comprises about amino acid residues 1-75 of an interferon-α, A comprises about amino acid residues 76-95 of IFN-α2c, and B comprises about amino acid residues 96-166 of IFN-α21a;
 - (c) amino acid sequences with a structure X-A-Y, wherein X comprises about amino acid residues 1-75 of an interferon- α , A comprises about amino acid residues 76-95 of IFN- α 2c, and Y comprises about amino acid residues 96-166 of an interferon- α ; and
 - (d) amino acid sequences with a structure V-C-Y, wherein V comprises about amino acid residues 1-81 of an interferon- α , C comprises about amino acid residues 82-95 of IFN- α 2c, and Y comprises about amino acid residues 96-166 of an interferon- α ,

wherein the hybrid interferon- α polypeptide has interferon- α protein biological activity.

- 9. The hybrid interferon- α polypeptide according to claim 8, comprising one or more segments of interferon- α 21a and interferon- α 2c.
- 10. The hybrid interferon-α polypeptide according to claim 8, comprising an amino acid sequence selected from the group consisting of an amino acid sequence as set forth in SEQ ID NOs: 9, 11, 13, 30, 32, 34, 36, 38, 40, and 42.
- 11. The hybrid interferon-α polypeptide according to claim 10, wherein the sequence is selected from the group consisting of an amino acid sequence as set forth in SEQ ID NOs: 9, 13, 32, 34, 36, and 38.
- 12. The hybrid interferon- α polypeptide according to claim 8, comprising the amino acid sequence with a structure X-A-B, wherein X comprises about amino acid residues 1-75 of an interferon- α , A comprises about amino acid residues 76-95 of 1FN- α 2c, and B comprises about amino acid residues 96-166 of 1FN- α 21a.
- 13. The hybrid interferon-α polypeptide according to claim 8, comprising the amino acid sequences with a structure X-A-Y, wherein X comprises about amino acid residues 1-75 of an interferon-α, A comprises about amino acid residues 76-95 of 1FN-α2c, and Y comprises about amino acid residues 96-166 of an interferon-α.
- 14. The hybrid interferon- α polypeptide according to claim 8, comprising amino acid sequences with a structure V-C-Y, wherein V comprises about amino acid residues 1-81 of an interferon- α , C comprises about amino acid residues 82-95 of 1FN- α 2c, and Y comprises about amino acid residues 96-166 of an interferon- α .
 - 15. A nucleic acid molecule encoding a polypeptide according to claim 8.
 - 16. A recombinant vector comprising the nucleic acid molecule according to claim 15.
 - 17. A cell transformed with the recombinant vector according to claim 16.
 - 18. A pharmaceutical composition comprising:

a pharmaceutically acceptable vehicle or carrier; and at least one hybrid interferon-α polypeptide according to claim 8.

- 19. A method for treating a patient having a viral disease, comprising administering to said patient a therapeutically effective amount of at least one hybrid interferon- α polypeptide according to claim 8.
 - 20. The method according to claim 19, wherein the administration is by injection.
- 21. A method for regulating cell growth in a patient, comprising administering to said patient a therapeutically effective amount of at least one hybrid interferon-α polypeptide according to claim 8.
- The method according to claim 21, wherein the regulated cell growth is tumor cell growth.
 - 23. The method according to claim 21, wherein the administration is by injection.
